

# Top Target Injuries for the Oil and Gas Industry in Saskatchewan (2015-2021)

Data Source: Saskatchewan Workers' Compensation Board (WCB), as of 2022 Q2

**FIG 1: TOP INJURIES IN THE UPSTREAM OIL AND GAS INDUSTRY IN SK (2015-2021) BY CLAIM FREQUENCY AND SEVERITY**

**FIG 2: TOP INJURIES IN THE UPSTREAM OIL AND GAS INDUSTRY IN SK (2015-2021) BY WORKER AGE GROUP**

**TABLE 1: TOP 10 INJURIES BY FREQUENCY**

#	Top Injuries - Type of Accident	Total claim count (2015-2021)	% of total count
1	Struck by object	710	24%
2	Bodily reaction	357	12%
3	Fall on same level	299	10%
4	Overexertion	283	10%
5	Caught in/compressed by	262	9%
6	Exposure-noxious substance	172	6%
7	Fall to lower level	153	5%
8	Struck against object	119	4%
9	Highway accident	117	4%
10	Bodily reaction/exertion, NEC	97	3%
<b>Total</b>		<b>2,569</b>	<b>88%</b>

**TABLE 2: TOP 10 INJURIES BY SEVERITY**

#	Top Injuries - Type of Accident	Total claim cost (2015-2021)	% of total cost
1	Struck by object	\$ 5,723 K	20%
2	Fall on same level	\$ 3,873 K	14%
3	Caught in/compressed	\$ 3,041 K	11%
4	Fall to lower level	\$ 2,557 K	9%
5	Overexertion	\$ 2,431 K	9%
6	Highway accident	\$ 1,882 K	7%
7	Bodily reaction	\$ 1,868 K	7%
8	Explosion	\$ 1,465 K	5%
9	Bodily reaction/exertion, NEC	\$ 1,075 K	4%
10	Contact with temperature extreme	\$ 939 K	3%
<b>Total</b>		<b>\$ 24,854 K</b>	<b>88%</b>

## DEFINITIONS

**Target Injuries:** Claims grouped by type of accident (also called event or exposure) in a given period.

**Age Groups:** Based on the worker's age when injury was incurred.

**Claim Severity:** Based on the assumption that claims involving higher costs are more severe in nature.

**Claim Frequency:** Higher claim frequency implies higher claim count for a specific injury type over a period of time.

**Claim Cost:** The cost covered by the Saskatchewan WCB for all claims. This includes medical, rehabilitation, compensation and pension costs.

**Claim Rate:** The number of work-related injury claims per 100 person-years worked. The claim rate for age groups is calculated using Statistics Canada data.

**Person-Years:** Estimated number of full-time equivalent workers (2,000 work hours). It is derived from the employer's reported insurable earnings (assessable payroll) and the industry's average wage.

**Normalized Ranking:** For both claim severity and frequency, each of the target issues was given a normalized ranking using a method called feature scaling. This method scales the observed values to a range between 0 and 1, using this formula:  $x' = (x - \min(x)) / (\max(x) - \min(x))$ , where  $x$  is an original value, and  $x'$  is the normalized value. Ranks from both variables (frequency and severity) are then combined to give the final ranking.

**Oil and Gas Industry in Saskatchewan:** Includes 21 Rate Codes that fund Energy Safety Canada:

**Type of Accident:** Manner in which injury or disease was produced or inflicted by identified source (e.g., Struck by object). The following definitions of top target injuries are sourced from *CSA standard Z795-Coding of Work Injury or Disease Information*.

**Struck by Object:** The “struck by” codes apply to injuries produced by forcible contact or impact between the injured person and the source of injury when the motion producing the contact is primarily that of the source of injury rather than the person.

**Fall on Same Level:** Fall on same level applies to instances in which the injury was produced by impact between the injured person and the source of injury, the motion producing the contact being that of the person, under the following circumstances: (a) the motion of the person was generated by gravity following the person’s loss of equilibrium; and (b) the point of contact with the source of injury was at the same level or above the surface supporting the person at the inception of the fall.

**Bodily Reaction:** Codes in this group apply to injuries or illnesses resulting from a single incident of free bodily motion which imposed stress or strain on some part of the body. Generally, codes in this group apply to the occurrence of strains, sprains, ruptures, nerve damage, or other internal injuries or illnesses resulting from the assumption of an unnatural position or from voluntary or involuntary motions induced by sudden noise, fright, or efforts to recover from slips or loss of balance (not resulting in falls).

**Caught In or Compressed by Equipment or Object:** This group includes cases in which the injury was produced when a person or part of a person was injured by being squeezed, crushed, pinched, or compressed between two or more objects, or between parts of an object. Codes in this major group apply when a person, or part of a person’s body, was squeezed, pinched, compressed, or crushed in operating equipment, between other meshing objects, between a moving and stationary object, or between two or more moving objects.

**Overexertion:** Overexertion applies to cases, usually non-impact, in which the injury or illness resulted from excessive physical effort directed at an outside source of injury. The physical effort may involve lifting, pulling, pushing, turning, welding, holding, carrying, or throwing the source of injury.

**Highway Accident:** Highway accidents include accidents to vehicle occupants occurring on that part of the public highway, street, or road normally used for travel, as well as the shoulder and surrounding areas, telephone poles, bridge abutments, trees aligning roadway, etc.
