

Veteran Workers—Alberta O&G

Data as of Q4 2021

Report updated Aug. 2, 2022

WHO ARE VETERAN WORKERS?

Though not specifically defined by Occupational Health and Safety, for the purposes of this report a “veteran worker” is 55 years of age and older. Typically, these workers have decades of work experience. *Falls on same level* are the most significant type of injury for this group.

WHY ARE VETERAN WORKERS AT RISK?

Increased risk of injury in this group is attributed to:

- Normalizing of risks associated with falls
- Pre-existing injuries and health challenges, which increase the severity of fall injuries
- Reduced dexterity
- Slower reaction time
- Carrying loads
- Lack of awareness of changing ground conditions

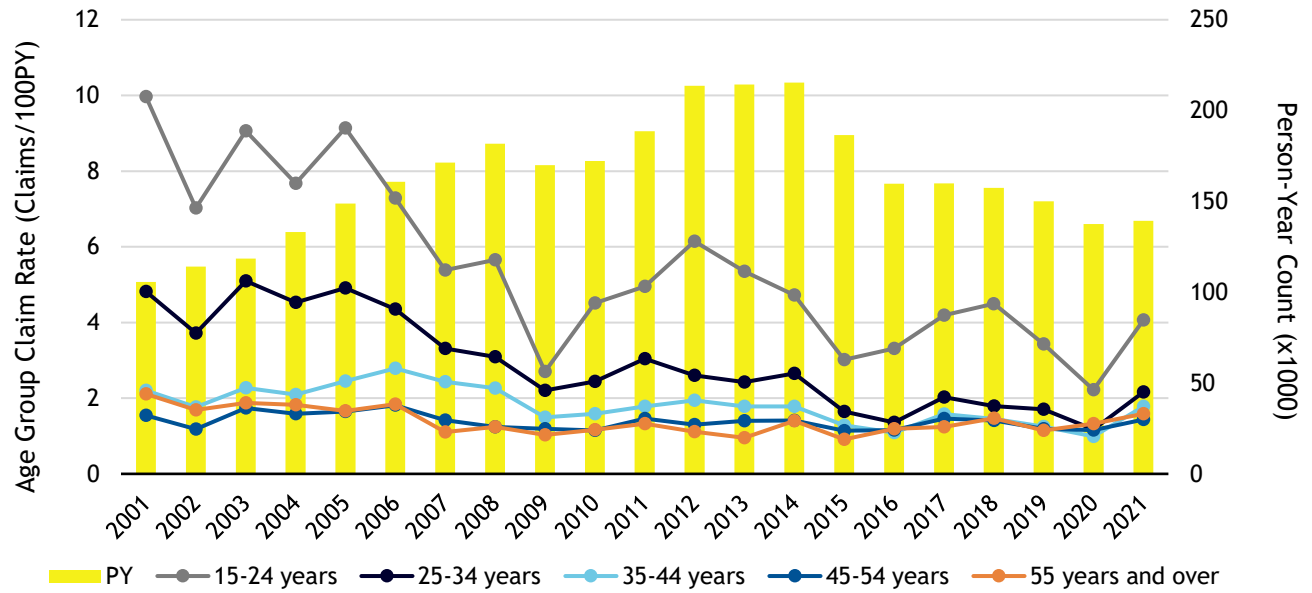

WHAT CAN BE DONE TO ADDRESS THESE RISKS?

- Ensure workers are fit for duty
- Training on how to fall to minimize injury
- Stretching and warm-up before starting work
- Ergonomic assessments
- Use of engineering tools and fittings to minimize exerted force
- Management of change with respect to job scope and assigned tasks
