

STUCK IN A RUT?

RECOVER A VEHICLE SAFELY

Getting your vehicle out safely requires careful planning and consideration. Call the professionals – they are trained to recognize and mitigate hazards to get the job done safely. Don't overlook these hazards. No job is worth losing your life.

1 EQUIPMENT LIMITATIONS

Having the right equipment is crucial. Know your equipment's purpose and limitations.

2 ENERGY RELEASES

The release of energy can lead to projectiles or vehicle damage.

3 CONNECTION FAILURE POINTS/TIE OFF POINTS

Ensure you are using the correct connection and tie off points for your vehicle.

4 DANGER/SAFE ZONES

Stay in safe zones to reduce the risk of injury.

5 UNDERSTANDING THE WEIGHTS

The ground conditions beneath your vehicle can add to its weight and affect the amount of force required to recover it.

6 UNDERSTAND YOUR ENVIRONMENT

Don't just focus on your vehicle; look for oncoming traffic, loose gravel, or slippery surfaces.

DON'T RISK LIFE OR LIMB - CALL A PROFESSIONAL

Successful journey management includes knowing who to call when trouble happens. Have a plan and a list of professionals that can help.
